

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)
Department of Computer Science and Engineering
ASSESSMENT TOOL 1 – SCENARIO-BASED ASSESSMENT (MCQ)

Course Code:	CSA5802	Course Title:	DEVSECOPS ENGINEERING AND APPLICATION SECURITY
CO Assessed:	CO5 – Precision (BL1, BL2, BL3)	Assessment:	Assessment Tool 1
Weightage:	30% of CIA	Total Marks:	100
CO5 Statement:	Scenario-Based MCQ Assessment (6 Options with Multiple Correct Answers using Reward and Penalty Strategy).		
Student Name:	V.Lokesh kumar	Reg. No.:	192521170
Section / Batch:	C	Date:	

Instructions to Students

- Read each security scenario carefully before selecting the answer options.
- Each question contains six options and may have more than one correct answer.
- Select only the options that are technically justified by the given scenario and security concepts.
- Follow the specified reward and penalty strategy; incorrect selections may reduce the score.
- Complete all questions independently and submit the assessment within the prescribed time.

Question Type	Focus Area	Questions	Marks
SCENARIO-BASED MCQ	Concept Application	Q1	Q1 – 100
GRAND TOTAL:		100 Marks

Study Flashcards

5. A secure-by-design simulation shows strong threat coverage but several high-risk paths remain. What should the team infer?

- ☐ Security controls should be removed to simplify the architecture.
- ☐ The design is complete because threat coverage is high.
- ☐ High-risk paths are acceptable whenever threats have been identified.
- ☐ Threat analysis is useful, but unresolved attack paths still require architectural treatment.
- ☐ Remaining high-risk paths should be reviewed and mitigated before treating the design as complete.
